

XombiX Whitepaper

Introduction

In a sea of forks, fake promises, and follower-bought charts, XombiX arrives as a conscious anomaly.

We're not here to impress — we're here to expose.

Not to build castles in the sky — but to meme the broken system into awareness.

XombiX is not a parody. It's a protocol dressed in irony.

Vision & Mission

We believe memes are the mythology of modern culture.

XombiX unites self-aware investors into a decentralized movement powered by cultural intelligence and creative rebellion.

We don't promise revolution. We promise recognition — of the absurdity, and the tools to outgrow it.

Tokenomics

| Allocation | % | Tokens | Notes |
|--------------------|-----|-------------|--|
| Presale | 5% | 38,850,000 | 500 people x 77,700 Presale Price: \$0.00077 |
| Developer (Locked) | 15% | 116,550,000 | Locked for 7 months, then linearly vested monthly |
| Community Reserve | 35% | 271,950,000 | DAO, staking, airdrops |
| Marketing & Ops | 15% | 116,550,000 | Growth, campaigns |
| Partnerships | 10% | 77,700,000 | Strategic tools & allies |
| DEX Liquidity | 10% | 77,700,000 | Locked LP pools |
| Donations | 10% | 77,700,000 | Mars Survival Support Fund* |

** Going to Mars takes more than dreams. Colonies need culture and funding.
That's why XombiX created the Mars Survival Support Fund.
DAO-managed. Meme-powered.*

Token Utility

Now that you know how XombiX is structured, here's what it actually lets you do.

XombiX is not a coin you hold.
It's a tool you wield.

Here's what XombiX unlocks:

MemeDAO Voting

Cast your vote on proposals that shape the future — from treasury allocations to meme campaigns, shrine designs to burn events. One token, one voice.

Meme-to-Earn Participation

Earn XombiX by creating viral content. The more impact your meme has, the more you earn. Humor = capital.

Exclusive NFT Drops

Access NFT “Shrines” — cultural relics of the memeverse — available only to XombiX holders.

Meme Battle Arenas

Enter creative combat. Token holders can compete in community meme tournaments judged by the DAO.

Cultural Identity

Holding XombiX is a signal — a membership card in a decentralized resistance. It's your cultural proof-of-work.

Special Events & Calls

Participate in token-gated events, community AMAs, and secret missions. Only for those who dare.

Protocol-Level Access

XombiX will serve as the native utility token for future integrations, enabling access to staking systems, DAO proposals, and smart-contract interactions across the ecosystem.

Don't just hold XombiX.
Wield it.

You're not buying hype. You're becoming signal.

Presale Vesting

Month 0: 100% locked

Months 1–6: Linear unlock in 6 equal monthly parts (16.66% per month)

Vesting total: Fully unlocked by Month 7

Utility

- Voting in MemeDAO
- Access to NFT drops, meme battles
- Meme-to-earn programs
- Cultural identity via holding
- Access to XombiX – only voting events
- Entry to meme tournaments
- DAO proposals & treasury allocation rights

Roadmap

June 2025 – The Signal

- Website launch
- Whitepaper release
- Presale opens

Q3 2025 – Formation

- MemeDAO launch
- Staking + Meme-to-Earn
- Viral campaigns

Q4 2025 – Cultivation

- DEX listings
- NFT shrines
- Strategic partnerships

2026 and Beyond – Written by the Community

XombiX doesn't follow a fixed path.

Its future will be shaped by the collective — not dictated by a roadmap.

Decisions belong to the DAO. Direction to the memes. And fire to us.

DAO & Treasury Governance

You don't follow XombiX.
You become it.

The XombiX DAO is not a figurehead.
It is the living infrastructure of collective choice — powered by memes, driven by signal.

Proposal System

Any holder with at least 77,700 XOMBIX tokens will be eligible to submit proposals to the DAO.

These proposals may include funding community meme campaigns, allocating treasury to NFT projects, launching staking or burn events, or expanding the Mars Survival Support Fund.

Voting Rights

Each token represents one vote. All proposals undergo a public voting period to ensure transparent, community-led decision-making.

Voting will be facilitated through the Snapshot platform, allowing XOMBIX holders to vote on proposals without gas fees.

DAO Treasury

The treasury holds a reserved portion of the total supply and will collect revenue from fees, events, and ecosystem partnerships.

It is secured through multi-signature wallets and time-lock mechanisms.

Funds will only be released if proposals are approved by the DAO.

Security Measures

Multi-signature authorization prevents unilateral fund movements.

Time-locks introduce intentional delays for major transactions.

All activity is verifiable via blockchain explorers to maintain full transparency.

Join the Process

Holding XOMBIX makes you a voter, a proposer, and a participant in building the system. This isn't a top-down council. It's bottom-up chaos — refined through memes and collective intent.

No kings. No council. Just coordination.

Blockchain & Smart Contract

Yes, we exist.

Not in imagination but on chain.

XombiX is currently deployed on the “Sepolia testnet” our cosmic sandbox for iterating code, simulating chaos, and hardening trust.

The mainnet launch is scheduled for [Base / Ethereum / TBD], using a battle-tested “ERC-20” architecture (yes, we still believe in standards).

Current testnet contract address:

0x778FA34e8c26c4EB5BC849807432dD45D33f77ea

View on Sepolia Etherscan

(<https://sepolia.etherscan.io/address/0x778FA34e8c26c4EB5BC849807432dD45D33f77ea>)

As of now, the entire token supply is held by the deployer for simulation purposes. No distribution has occurred on the testnet, and no liquidity or transfers are enabled. This structure ensures secure testing and prevents misuse prior to mainnet launch.

When mainnet dawns, our contracts will be:

- *Audited (we don't trust anyone — not even ourselves)
- *Non-upgradeable (because power should not mutate)
- *Time-locked (to delay temptation)
- *Multi-signature secured (because one key = no key)

Source code will be fully open on Etherscan and GitHub because transparency isn't a feature, it's a weapon.

Want to build with us?

Or just watch from orbit?

Either way, you're invited.

This isn't just a chain.
It's the signal.

Team

No heroes. No faces. No LinkedIn.

We believe in building systems, not personal brands.

XombiX is anonymous by design — not to escape, but to stay culture-first.

Security

- External audits
- Time-locked contracts
- No upgrade switches
- Multi-sig treasury
- Locked liquidity

Philosophy

We don't chase hype. We mock it.

We don't pitch vision. We deliver satire with structure.

XombiX is a meme protocol, a mirror to the market, and a resistance movement disguised as a token.

Presale Structure & Vesting

The XombiX presale is limited to 500 participants.

Each participant will receive exactly 77,700 XOMBIX at a price of \$0.00077 per token.

No more, no less.

The planned listing price is \$0.0077, providing early believers with a 10x entry advantage.

To ensure long-term commitment and prevent early dumping, a strict vesting schedule will apply:

- Month 0–1: Tokens are fully locked.
- Month 2–7: 16.66% of tokens unlock monthly (linear vesting).
- By Month 7: All tokens are fully unlocked.

Founders and developers will follow the same vesting timeline to ensure full alignment with the community.

Risk & Disclaimer

This is not financial advice.

XombiX is not a get-rich-quick scheme.

It's not backed by venture capital, celebrity endorsements, or promises of eternal green candles.

We are not your gurus.

We are not your exit strategy.

We are not promising the moon — because we understand how gravity works.

Holding XOMBIX involves risk.

The protocol is experimental. The community is unpredictable. The market is irrational. Smart contracts may contain bugs. MemeDAO decisions may fail — or succeed beyond reason.

Liquidity can evaporate overnight. Your tokens could become worthless — or worth everything — depending on how the story unfolds.

XombiX is a cultural artifact wrapped in code, not a guaranteed outcome.

If you're here, you're part of a movement, not a transaction.

Do your own research.

Take your own responsibility.

And above all — laugh wisely.

This is not just a token. It's a torch.

We carry memes instead of weapons.

We build laughter into the blockchain.

And when they ask what we are

We simply say:

****XombiX****
